Paper 4 Theory (Extended)

February/March 2023

1 hour 15 minutes

You must answer on the question paper.

No additional materials are needed.

INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You may use a calculator.
- You should show all your working and use appropriate units.

INFORMATION

- The total mark for this paper is 80.
- The number of marks for each question or part question is shown in brackets [].
- The Periodic Table is printed in the question paper.

This document has **12** pages.

1 This question is about gases found in clean, dry air and gases found in polluted air.

(a) Name **one** gas found in clean, dry air which contributes to global warming.

..... [1]

(b) State the percentage of nitrogen in clean, dry air.

..... [1]

(c) Name the substance used to remove sulfur dioxide in flue gas desulfurisation.

..... [1]

(d) Nitrogen dioxide, NO_2 , is formed in car engines.

Name the equipment in a car exhaust used to remove the NO_2 formed in car engines.

..... [1]

(e) All gases diffuse.

(i) Choose from the list of formulae the gas which diffuses most quickly.

Draw a circle around your answer.

CO CO_2 CH_4 NO_2 SO_2

[1]

(ii) Explain your answer to (i).

..... [1]

(f) State **one** adverse effect of carbon monoxide on human health.

..... [1]

(g) Carbon dioxide, CO_2 , is a reactant in photosynthesis.

Name the **two** products of photosynthesis.

..... and [2]

(h) Complete the dot-and-cross diagram in Fig. 1.1 for a molecule of CO_2 .

Show outer shell electrons only.

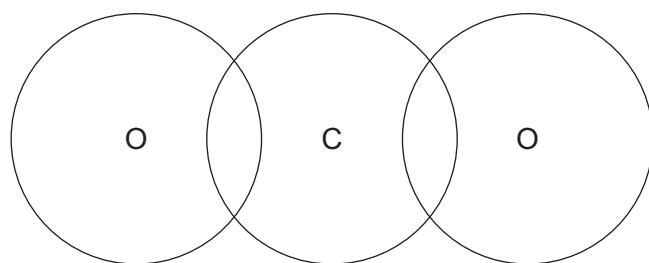

Fig. 1.1

[2]

[Total: 11]

- 2 Lithium, sodium and potassium are Group I elements.

- (a) Name the type of bonding in these elements.

..... [1]

- (b) Sodium reacts with cold water to form hydrogen gas and a solution of a strong alkali.

- (i) State the test for hydrogen gas.

test

positive result

[1]

- (ii) Suggest the pH of a solution of a strong alkali.

pH = [1]

- (iii) Name a substance which can be used to confirm the pH of a solution of a strong alkali.

..... [1]

- (iv) Write the symbol equation for the reaction between sodium and cold water.

Include state symbols.

..... [3]

- (c) Lithium has two naturally occurring types of atoms, ${}^6\text{Li}$ and ${}^7\text{Li}$.

- (i) State the name given to atoms of the same element with different nucleon numbers.

..... [1]

- (ii) Complete Table 2.1 to show the number of protons, neutrons and electrons in the atom and ion of lithium shown.

Table 2.1

| | ${}^6\text{Li}$ | ${}^7\text{Li}^+$ |
|-----------|-----------------|-------------------|
| protons | | |
| neutrons | | |
| electrons | | |

[3]

- (iii) Table 2.2 shows the relative abundance of the two naturally occurring atoms of lithium.

Table 2.2

| | | |
|--------------------|-----------------|-----------------|
| atom | ${}^6\text{Li}$ | ${}^7\text{Li}$ |
| relative abundance | 10% | 90% |

Calculate the relative atomic mass of lithium to **one** decimal place.

$$\text{relative atomic mass} = \dots\dots\dots [2]$$

- (d) Potassium oxide, K_2O , is an ionic compound.

Complete Fig. 2.1 to show the electronic configurations of the ions in potassium oxide. Show the charges on the ions.

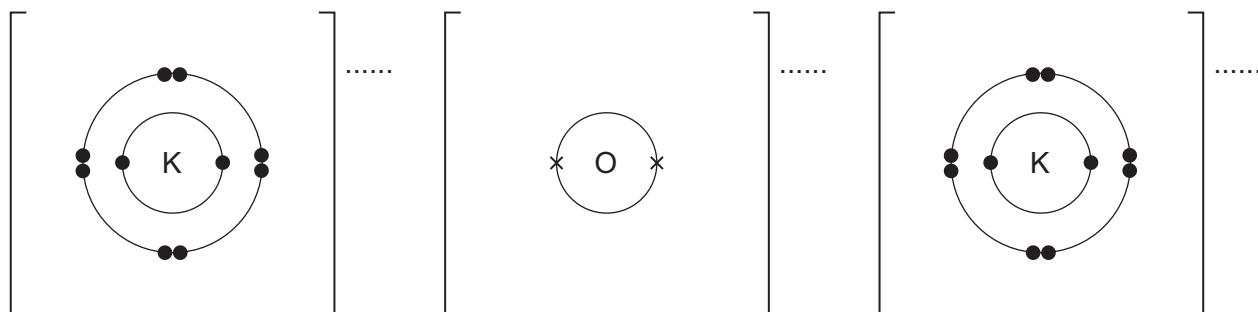

Fig. 2.1

[3]

[Total: 16]

- 3 The Haber process is used to manufacture ammonia.

- (a) State the main source of each gas used in the Haber process.

nitrogen

hydrogen

[2]

- (b) The equation for the Haber process is shown.

The reaction is reversible. The forward reaction is exothermic.

- (i) State what is meant by the symbol ΔH .

..... [1]

- (ii) ΔH for the forward reaction is -92 kJ/mol .

State why this value shows that the forward reaction is exothermic.

..... [1]

- (iii) State the typical conditions and name the catalyst used in the Haber process.

temperature $^{\circ}\text{C}$

pressure kPa

catalyst

[3]

- (iv) Complete Table 3.1 to show the effect, if any, when the typical conditions in the Haber process are changed. Use only the words **increases**, **decreases** or **no change**.

Table 3.1

| change to typical conditions | effect on the rate of the forward reaction | effect on the concentration of $\text{NH}_3(\text{g})$ at equilibrium |
|------------------------------|--|---|
| temperature increases | increases | |
| pressure decreases | | |
| no catalyst | decreases | |

[4]

- (v) Explain in terms of collision theory why increasing the temperature increases the rate of the reaction.

.....
.....
.....
.....
.....

[3]

- (c) Ammonia reacts with an acid to form ammonium sulfate, $(\text{NH}_4)_2\text{SO}_4$.

- (i) State the formula of the acid used.

..... [1]

- (ii) State **one** use of ammonium sulfate.

..... [1]

- (iii) Calculate the percentage composition by mass of nitrogen in $(\text{NH}_4)_2\text{SO}_4$.

percentage of nitrogen = % [2]

[Total: 18]

4 Copper is element 29 in the Periodic Table.

(a) Brass contains copper.

(i) Name the other metal in brass.

..... [1]

(ii) State the term given to a mixture of a metal with another element.

..... [1]

(b) Copper can be stretched into wires. Copper wires conduct electricity.

(i) Name the property of metals which means that they can be stretched into wires.

..... [1]

(ii) Name the particles responsible for the conduction of electricity in solid copper.

..... [1]

(c) Copper is a transition element.

Some physical and chemical properties of transition elements are shown.

physical properties:

- high density
- high strength

chemical properties:

- form coloured compounds
- have ions with variable oxidation numbers

(i) State one **other** physical property of transition elements.

..... [1]

(ii) State one **other** chemical property of transition elements.

..... [1]

(d) Hydrated copper(II) sulfate is a coloured compound. It exists as hydrated crystals which contain water molecules.

- (i) State the term given to water molecules present in hydrated crystals.

..... [1]

- (ii) State the colour of hydrated copper(II) sulfate crystals.

..... [1]

- (iii) Write the formula of hydrated copper(II) sulfate.

..... [2]

(e) Copper(II) oxide is formed when copper(II) nitrate, $\text{Cu}(\text{NO}_3)_2$, is heated.

- (i) State the class of oxide to which copper(II) oxide belongs.

..... [1]

- (ii) State the meaning of the Roman numeral (II) in the name copper(II) oxide.

..... [1]

- (iii) 0.0200 moles of $\text{Cu}(\text{NO}_3)_2$ is heated.

Calculate the mass of 0.0200 moles of $\text{Cu}(\text{NO}_3)_2$.

mass = g [2]

- (iv) Calculate the **total** volume of gas, in dm^3 at r.t.p., produced when 0.0200 moles of $\text{Cu}(\text{NO}_3)_2$ is heated.

volume = dm^3 [2]

- (v) Powdered aluminium reduces copper(II) oxide.

Write the symbol equation for this reaction.

..... [2]

[Total: 18]

- 5 Propane, propene, propan-1-ol and propanoic acid are members of different homologous series. Molecules of these substances contain three carbon atoms.

(a) Explain why members of a homologous series have similar chemical properties.

..... [1]

(b) Name the homologous series to which propanoic acid belongs.

..... [1]

(c) State the general formula of the homologous series to which propanoic acid belongs.

..... [1]

(d) Propan-1-ol has an unbranched isomer.

- Name this isomer.

.....

- Draw the displayed formula of this isomer.

[2]

(e) Propane and propene can be manufactured by heating decane, C₁₀H₂₂, in the presence of a catalyst. One other product is formed.

(i) Complete the equation for this reaction.

(ii) Name this manufacturing process.

..... [1]

- (f) Propene forms a polymer named poly(propene).
- (i) Draw the displayed formula of a section of poly(propene) showing **three** repeat units.
- [2]
- (ii) State the type of polymerisation that occurs when propene forms poly(propene).
- [1]
- (g) Propanoic acid reacts with aqueous sodium carbonate to form a salt.
- (i) Suggest the name of the salt formed.
- [1]
- (ii) Suggest the formula of the anion in this salt.
- [1]
- (h) Propanoic acid forms an ester when it reacts with ethanol in the presence of a catalyst.
- (i) Suggest a suitable catalyst.
- [1]
- (ii) Name the ester formed.
- [1]
- (iii) Draw the displayed formula of this ester.
- [2]

[Total: 17]
